ABOUT

Full stack software engineer, committed to cross-functional teamwork, with experience creating highly scalable, robust enterprise applications as well as strong expertise in Java, AWS, and modern frontend frameworks.

EXPERIENCE

Software Engineer, *CapitalOne*

February 2023 - current

- Led initiative to standardize enterprise contribution models, increasing platform-consumer collaborations by 40% and decreasing consumer team onboarding time by 30%
- Refactored case management system business logic in the case management system, eliminating a long-standing defect and reducing manual developer toil by 15% through automation and cleaner code
- Implemented code-agnostic feature flagging mechanism, utilizing Java, AWS Lambda layers and Optimizely; scaled adoption across teams to achieve 60% faster release cycles with significantly fewer rollbacks and production incidents
- Delivered a mission-critical full-stack capability in partnership with business stakeholders, implementing a new Rest API and leveraging Java and AWS services to retrieve and persist sensitive NAICS data to resolve a complex compliance-driven business requirement
- Piloted a cloud resilience initiative by orchestrating failover and recovery of AWS resources (S3, EC2, Lambda, RDS, CloudFormation, and Step Function) across environments; authored a runbook that accelerated recovery speed by 60% and strengthened disaster readiness.

Software Engineering Intern, *Ai4Govt*

January 2021 – August 2021

Ai4Govt builds data tools for government agencies, helping them manage complex information securely and efficiently

- Conducted end user interviews to identify critical pain points, designed solutions in Figma, and implemented new features using React and JavaScript, directly improving usability and customer satisfaction
- Partnered with executives, product managers, designers, stakeholders, and users to deliver a scalable, compliant case management system for a major city's legal infrastructure
- Drove a full UI refactoring through a Figma-based design system, accelerating developer velocity and improving accessibility and UX consistency

EDUCATION

University of North Carolina at Chapel Hill – Chapel Hill, NC
B.S. in Computer Science; Minors in Astronomy and Data Science

August 2018 - May 2022

SKILLS

- **Full-stack Development:** Java, JavaScript, TypeScript, Python, C++, APIs, Test-driven development
- **Cloud Services:** AWS (EC2, Lambda, RDS, S3, DynamoDB, OpenSearch, etc...), Docker, Jenkins
- **Data Science:** R, Python, MatLab, Apache Spark
