ABOUT

Product-minded full-stack engineer with startup and enterprise experience, committed to cross-functional teamwork, owning complex problems, and delivering impact to users

EXPERIENCE

Software Engineer, *CapitalOne*

February 2023 - current

- Built a reusable, production-grade feature flagging system (Optimizely + AWS Lambda Layers) with caching, environment-aware configuration, and safe fallbacks; drove adoption across 5 teams, replacing 90-minute deploys with 10-minute flag flips and enabling faster releases, broader testing, and fewer production incidents
- Piloted the team's first cloud resiliency exercise by validating AWS resource posture (S3, EC2, Lambda, RDS, CloudFormation, etc...) and coordinating multi-environment region failover; authored a minute-by-minute runbook and reduced recovery execution time by 60%
- Standardized contribution models across engineering teams by defining best practices and aligning stakeholders, resulting in 40% more cross-team contributions and 30% faster onboarding for contributing teams
- Designed and implemented an auditable database table and REST API in Java/RDS to persist and retrieve NAICS codes, replacing a hardcoded UI list and enabling a compliance-driven data enrichment workflow
- Diagnosed and resolved a long-standing Hibernate ORM production defect by redesigning object mappings and refactoring dependent business logic, eliminating a recurring weekly production alert

Software Engineering Intern, *Ai4Govt*

January 2021 – August 2021

Ai4Govt builds tools for government agencies, helping them manage complex information securely and efficiently

- Led a UI refactor aligned to a Figma-based design system, creating reusable components that improved accessibility, consistency, and developer velocity
- Conducted end-user interviews, translated findings into Figma prototypes, and implemented features in React/JavaScript that improved usability across the case management workflow
- Collaborated with executives, product managers, and designers to deliver a scalable, compliance-oriented case management system supporting a major city's legal processes

EDUCATION

University of North Carolina at Chapel Hill – Chapel Hill, NC

August 2018 - May 2022

B.S. in Computer Science; Minors in Astronomy and Data Science

SKILLS

- **Languages/Frameworks:** Java (Hibernate/JPA), Python, JavaScript/Typescript, React, Angular
- **System Architecture and Design:** Microservices, Serverless Architecture, RESTful APIs, Data Modeling, and Feature Flagging (Optimizely)
- **Cloud, Infrastructure and Ops:** AWS (Lambda, EC2, S3, RDS, DynamoDB, CloudFormation, API Gateway), Docker, CI/CD, and Observability (New Relic, Splunk, PagerDuty)
